Lewatit® FO 36 – Adsorber for the Removal of Arsenic from Potable Water

Lewatit® FO 36 is designed to reduce the arsenic contamination in potable water supplies, and to meet stringent requirements of regional legislation at the same time. More than 20 industrial filters are successfully operated worldwide with our even further improved Lewatit® FO 36.

Selectivity

In comparison to strongly basic anion exchange resins, Lewatit® FO 36 (Figure 1) selectively adsorbs arsenic as both arsenate (AsV) as well as arsenite (AsIII). Other anions, such as chloride, sulfate, or nitrate, are not adsorbed and do not influence the uptake of arsenic. The capacity of Lewatit® FO 36 for arsenic is significantly higher than that of conventional anion exchange resins. Minor constituents, such as silicate, phosphate, vanadate, and antimonate, are co-adsorbed by Lewatit® FO 36. LANXESS recently developed the SESARIX technology for arsenic removal from highly silicate contaminated waters.

Regeneration

Adsorbed arsenic can be removed from the exhausted adsorber by applying a specially developed regeneration method based on extraction with alkaline solutions in combination with sodium chloride. After conditioning with diluted acid, Lewatit® FO 36 is regenerated and ready for another loading cycle. More than ten cycles are reliably implementable without any capacity loss.

The storage ability of arsenic-loaded resin is proofed according to elution tests by EPA method 1311 TCLP.

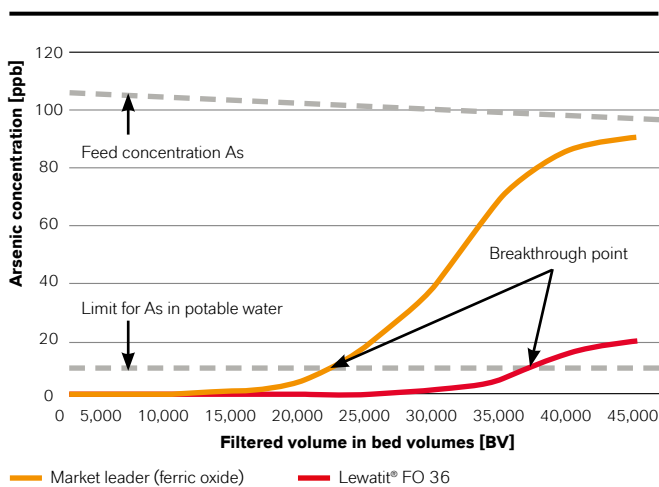

Figure 1: Chemical structure and appearance

Operating capacity

The arsenic uptake of **Lewatit® FO 36** depends on the concentration of arsenic present in the solution. Under field conditions arsenic feed concentrations of 0.01 mg/l up to 0.1 mg/l are expected. The operating capacity under these conditions usually is in a range of 3 to 4 g/l of resin.

Figure 2: Benchmark presenting breakthrough curve of improved **Lewatit® FO 36** and granulated ferric oxide market leader

Specific velocity: 20 BV/h, feed concentration 100 µg/l arsenate V (AsV) in neutral tap water, 8 mg/l silica as SiO₂, 100 µg/l phosphorus, 150 mg/l bicarbonate, 70 mg/l chloride, 100 mg/l sulfate

Figure 2 shows an example of breakthrough curves of improved **Lewatit® FO 36** compared to ferric oxide market leader material under field conditions. After the passage of about 38,000 bed volumes of feed, outlet concentrations

approach 10 ppb and a gradual breakthrough of arsenic begins. The operating capacity at the breakthrough point is 3.8 g of adsorbed arsenic per liter of resin. Competitor material shows exhaustion after 22,000 bed volumes of feed and therefore 2.2 g/l arsenic capacity. These results were obtained at LHSV 20 (bed vol/h). At lower LHSV and two filters in series in lead-lag operation, arsenic capacities of **Lewatit® FO 36** can further increase up to 50%.

Certifications

Lewatit® FO 36 is certified under NSF/ANSI Std 61 “Drinking Water System Components – Health Effects.”

It is tested and certified under BS 6920 by the British WRAS, “Water Regulations Advisory Scheme,” and is in compliance with the European Resolution ResAP(2004)3. Total Organic Carbon (TOC) release is according to the AFNOR test T 90-601.

LANXESS staff collaborates with the EU committees in order to create norms for the application of ion exchange resins and to assure a registered and licensed application in potable water treatment.

Health and Safety Information: Appropriate literature has been assembled which provides information concerning the health and safety precautions that must be observed when handling the LANXESS products mentioned in this publication. For materials mentioned which are not LANXESS products, appropriate industrial hygiene and other safety precautions recommended by their manufacturers should be followed. Before working with any of these products, you must read and become familiar with the available information on their hazards, proper use and handling. This cannot be overemphasized. Information is available in several forms, e.g., material safety data sheets, product information and product labels. Consult your LANXESS representative in Germany or contact the Regulatory Affairs and Product Safety Department of LANXESS Deutschland GmbH or – for business in the USA – the LANXESS Corporation Product Safety and Regulatory Affairs Department in Pittsburgh, PA, USA.

Regulatory Compliance Information: Some of the end uses of the products described in this publication must comply with applicable regulations, such as the FDA, BIR, NSF, USDA, and CPSC. If you have any questions on the regulatory status of these products, contact – for business in the USA – the LANXESS Corporation Regulatory Affairs and Product Safety Department in Pittsburgh, PA, USA or for business outside US the Regulatory Affairs and Product Safety Department of LANXESS Deutschland GmbH in Germany. The manner in which you use and the purpose to which you put and utilize our products, technical assistance and information (whether verbal, written or by way of production evaluations), including any suggested formulations and recommendations are beyond our control. Therefore, it is imperative that you test our products, technical assistance and information to determine to your own satisfaction whether they are suitable for your intended uses and applications. This application-specific analysis must at least include testing to determine suitability from a technical as well as health, safety, and environmental standpoint. Such testing has not necessarily been done by us. Unless we otherwise agree in writing, all products are sold strictly pursuant to the terms of our standard conditions of sale. All information and technical assistance is given without warranty or guarantee and is subject to change without notice. It is expressly understood and agreed that you assume and hereby expressly release us from all liability, in tort, contract or otherwise, incurred in connection with the use of our products, technical assistance, and information. Any statement or recommendation not contained herein is unauthorized and shall not bind us. Nothing herein shall be construed as a recommendation to use any product in conflict with patents covering any material or its use. No license is implied or in fact granted under the claims of any patent.
